DETAILED ACTION

 A telephone call was made to Michael Makuch on 09/02/10 to request an oral election to the above restriction requirement, but did not result in an election being made.

PCT: Lack of Unity

Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claim(s) 1-9, 11-14, 19-24, drawn to a method of vapor deposition, classified in class 427, subclass 248.1.
 - Claim(s) 15, drawn to a semiconductor product, classified in class 438, subclass 648.
 - III. Claim(s) 16, drawn to a software program, classified in class 700, subclass 1.
 - Claim(s) 18, drawn to vapor apparatus, classified in class 118, subclass
 715.

Posteriori

 Lack of unity of invention may become apparent under "a posteriori," that is, after taking the prior art into consideration: the independent claims appears to be drawn to A Application/Control Number: 10/584,642

Art Unit: 1715

+ X and A + Y, and the unity of invention (i.e. species) presents "a posteriori" as A being common to both claims, where the prior art teaches A.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature which is referred to Annex B of Appendix A1 of the MPEP (Administrative Instructions under the PCT: "Unity of Invention"). The express "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art" with respect to novelty and inventive step (Rule 13.2). Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed special technical features. In this case, the technical feature shared by each invention is: a first titanium nitride layer on a substrate and a second titanium nitride layer on the first nitride layer.

The question of unity of invention has been reconsidered retroactively by the examiner in view of the search performed. A review of Fiordalice (US 5420072), which teaches forming a second titanium nitride layer on a first nitride layer on a substrate [abstract], makes clear that the inventions of the groups I-II lack the same or corresponding special technical feature due to novelty and, or inventive step being deficient. In this case, the group lacks special technical feature due to a lack of inventive step because the cited reference(s) appear to demonstrate that the claimed technical feature does not define a contribution which each of the inventions, considered as a

whole, makes over the prior art. Accordingly, the prior art of the record supports restriction of the claimed subject matter in to the groups as mentioned immediately above.

Conclusion

- No claim is allowed.
- 5. All the pending claims are subject to restriction/election requirement.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MANDY C. LOUIE whose telephone number is (571)270-5353. The examiner can normally be reached on Monday to Friday, 7:30AM - 5:00PM EST.
